(54) Abstract Title

Broom with two usable surfaces

(57) A broom comprises a dual purpose head of 'v' shaped appearance with rounded top and ends shaped or moulded from lightweight wood or plastic with a stale mounted in the centre, soft bristles protruding from one side of the head and hard bristles protruding from an opposite side which allows one set of bristles to clear the ground during use. Rotation of the head through 180 degrees allows opposing bristles to face the ground when required. Preferably the ends of the head are rounded through both axis which allows the bristles to protrude at a greater angle to assist corner sweeping. Preferably the broom functions as both a hard and soft bristle broom combined in one compact head. The bristles may be of hard nylon or soft coconut hair.

THE UNIBROOM.

This invention relates to the UNIBROOM for the universal sweeping of various floor surfaces.

It is well understood that different indoor or outdoor surfaces require the use of soft or hard bristle brooms for sweeping away dirt and dust etc. This is normally achieved by the purchase of both soft and hard bristle brooms.

The UNIBROOM has been invented as a dual purpose broom to achieve the functions of both hard and soft bristle brooms but combined into one compact head. The UNIBROOM comprises of a single compact head with both soft and hard bristles set at an opposite angle of 110 degrees to produce a comfortable universal sweeping action. Due to the shape of single head the UNIBROOM can then be rotated through 180 degrees to acquire the desired sweeping bristles i.e. soft or hard.

Fig 1 shows the UNIBROOM'S dual purpose sweeping head and stale.

Fig 2 shows the front view of the UNIBROOM'S head with the relevant dimensions.

Fig 3 shows the end view of the UNIBROOM'S head with relevant dimensions.

Fig 4 shows the top view of the UNIBROOM'S head with relevant dimensions.

CLAIMS.

- (1) The Unibroom comprises of a dual purpose head which has a vee shaped appearance with rounded ends and a rounded top. as Figure 1. The single head is shaped or moulded in lightweight wood or plastic with the stale mounted in the centre. Both soft and hard bristles protrude from its head at an opposite angle of 110 degrees to each other. The angle leaves one set of the Unibroom's bristles to be clear of the ground at any given time.**
- (2) As claim 1 the Unibroom's dual purpose head has been designed with the capability of allowing either its soft or hard bristles to face the ground when desired.**
- (3) The universal sweeping action as claims 1 and 2 is acheived by a simple rotation of the head through 180 degrees until the opposing bristles face the ground.**
- (4) To aid the universal sweeping action as claim 2 and 3 the ends of the Unibroom's head are appropriately rounded through both axis to assist corner sweeping. Whilst the ends of the head are rounded the bristles protrude at a greater angle.**
- (5) The Unibroom as in claims 1 to 4 consists of hard nylon bristles one side of the head and soft coconut hair the other.**
